

**AEREON**

CREATING A CLEANER PLANET

# CASE STUDY #170101

**HP1500/HP3000 Flares**

## PROJECT DETAILS

Location:	Pecos, TX
Flow Rate :	5 MMscfd
Inlet Pressure( $\Delta P$ ):	20psi

Aereon's HP series flares are used to burn high pressure waste gas at multiple flow rates. Customer used multiple flares along with a combustor to be able to accommodate high and low pressures coming from multiple sources. The integral skid design reduces installation costs and has a minimal foot print compared to most elevated flares
