

**AEREON**

CREATING A CLEANER PLANET

CASE STUDY # 170102

**GHOST SERIES AB 200 x 20'
ENCLOSED COMBUSTORS**

PROJECT DETAILS

Location:	Mid-Continent
Heat Capacity:	18.4 MM BTU/hr
Inlet Pressure (ΔP):	2 psig

Aereon's Ghost Series enclosed combustors are designed to burn waste gas in a smokeless application. This customer in the Mid-Continent region is using 6 combustors as an emergency backup to the sales line. Waste gas is supplied through a manifold system. The small footprint and simple inlet valve train made the manifold header simple to install. As flow rates increase additional combustors are easily added keeping the client in compliance across a large flow rate range.
